In the Spotlight

As we make technological advances in industry, we need to remain vigilant in protecting workers against emerging hazards. As traditional jobs evolve to meet new challenges, workers may be faced with known risks that had not previously affected their occupation. These changes may also present us with the opportunity to eliminate hazards through planning, organization, and engineering...

It's with great sadness that one of our own has been seriously injured. Let us take a moment to reflect on how precious life is, how quickly accidents happen, how we can practice vigilance and caution in our everyday lives.

Look Listen Question Clarify Action

Jan van Zyl is in a stable condition at the Milpark hospital. His operations were successful and Jan is steadily healing. We thank you for keeping Jan in your thoughts and prayers...

Protect yourself

If someone calls you and requests your personal banking details or to install protection software on your PC, please end the phone call and contact the fraud contact centre

Be aware, stay alert and NEVER disclose sensitive information (One Time PIN (OTP), username, password, card and PIN details) to anyone - not even a bank official

Staff Shout-Out

Shut is over!
Well done to the teams

When you discover something that nourishes your soul and brings joy, care enough to make room for it in your life.

October is international breast cancer awareness month. According to CANSA (Cancer Association of South Africa) breast cancer is the most common cancer among South African women, however, a diagnosis does not have to be a death sentence if it is detected early enough. Men are also susceptible to developing breast cancer.

As with many other cancers, early detection is absolutely crucial in ensuring effective treatment and a positive outcome – and about 90% of women who are diagnosed early with breast cancer and treated appropriately survive for many years.
